

Episiotomies and Vaginal Lacerations are Common in Childbirth¹

Episiotomy is one of the most frequently performed obstetric surgical procedures.² Even in vaginal deliveries that do not involve episiotomies, vaginal laceration is commonplace.¹ Postpartum fluids and blood frequently contaminate the area, making timely and effective repair critical.²

Timely and effective vaginal laceration repair is essential to¹

- Reduce likelihood of infection
- Limit postchildbirth pain
- Prevent unnecessarily poor cosmetic results
- Minimize bleeding

COUNTING SPONGES IS A TIME-INTENSIVE TASK PRONE TO HUMAN ERROR³

Vaginal packing with gauze or sponges may be insufficient

Vaginal packing with gauze or sponges is commonly used to stop bleeding and block the flow of fluids, but this practice has its own complications and risks.

Counting sponges before and after surgical procedures is a time-intensive task prone to human error,³ and sponges may be retained after repair, potentially leading to infection.

To help clear the vaginal area for repair **without sponge counts and vaginal packing**, consider a cleaner alternative...

Vaginal Repair Balloon

INTRODUCING JETTY

The Clear Solution for Episiotomy and Vaginal Laceration Repair

Jetty is indicated for use during episiotomy and vaginal laceration repair to temporarily prevent the postpartum discharge of fluids from the vagina in order to assist with the repair procedure.*

- Prevents the flow of fluids into the surgical repair field
- Provides clarity for timely, effective repair
- Eliminates need for vaginal packing
- Avoids risk of retained sponges and resulting infection

Convenient, rapid filling directly from fluid source or a standard syringe

Balloon fills to a maximum volume of 300 mL with saline solution

Single-piece device simplifies use

No need for sponge counts

*See Package Insert for use instructions, warnings, contraindications, and precautions.
